05 QUESTION INTELLIGENCE

Question-by-question analysis

18 questions reviewed · published explanations reproduced in full

01 Physics

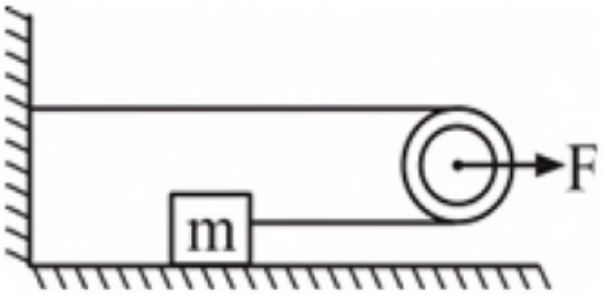

9 questions

QUESTION 01 PHYSICS

CORRECT

Current Electricity · Circuit analysis · Medium · MCQ · 4 marks · 2m 24s

In the circuit shown, the equivalent resistance between A and B is:

OPTIONS

A. The potential difference across the resistor is 6 V.

B. The current through the branch is 2 A.

C. The power dissipated in the circuit is 24 W.

D. A very long alternative answer that must wrap cleanly without clipping the question block or the option column.

STUDENT RESPONSE
B

CORRECT ANSWER
B

PERFORMANCE INSIGHT
Answered correctly — 4 marks

EXPLANATION

Complete solution. Apply the governing relation and substitute the values stated in the question.

$$\oint \mathbf{E} \cdot d\mathbf{A} = \frac{q_{enc}}{\varepsilon_0}$$

The closed surface encloses the charge distribution shown in the figure, so the normal component of the field is constant across the curved surface and vanishes across the flat

Physics · Q1 · explanation continued

ends. Evaluating the flux integral gives the result reported in the key. Check every sign convention, unit and limiting case before selecting the final option.

QUESTION 02 · PHYSICS

Electrostatics · Gauss law · Hard · MCQ · −1 mark · 4m 48s

Two statements are made about the field lines in the figure. Choose the correct option.

OPTIONS

A. Only statement I is correct.

B. Only statement II is correct.

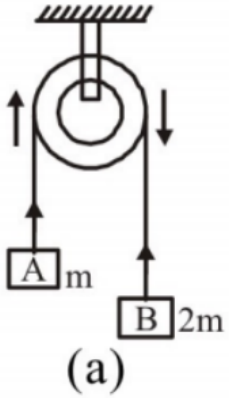

C. Both statements are correct.

D. Neither statement is correct.

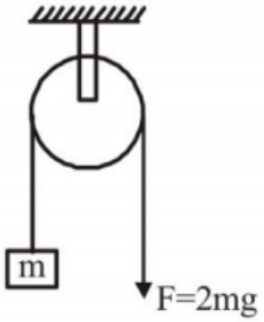

Student response: C

Correct answer: A

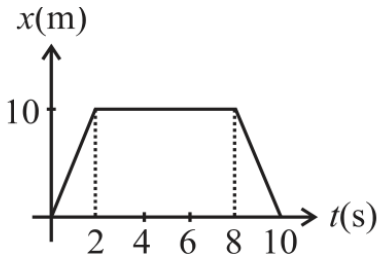

Answered incorrectly — 1 mark deducted · Concept Error · The field inside a conductor is zero in electrostatic equilibrium.

(a)

(b)

OPTION FIGURES

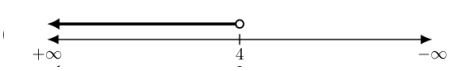

A.

B.

C.

D.

Physics · Q2 · explanation continued

EXPLANATION

Compare the flux through the two surfaces shown. Complete solution. Apply the governing relation and substitute the values stated in the question.

$$\oint \mathbf{E} \cdot d\mathbf{A} = \frac{q_{enc}}{\varepsilon_0}$$

The closed surface encloses the charge distribution shown in the figure, so the normal component of the field is constant across the curved surface and vanishes across the flat ends. Evaluating the flux integral gives the result reported in the key. Check every sign convention, unit and limiting case before selecting the final option.

MISTAKE NOTE

The field inside a conductor is zero in electrostatic equilibrium.

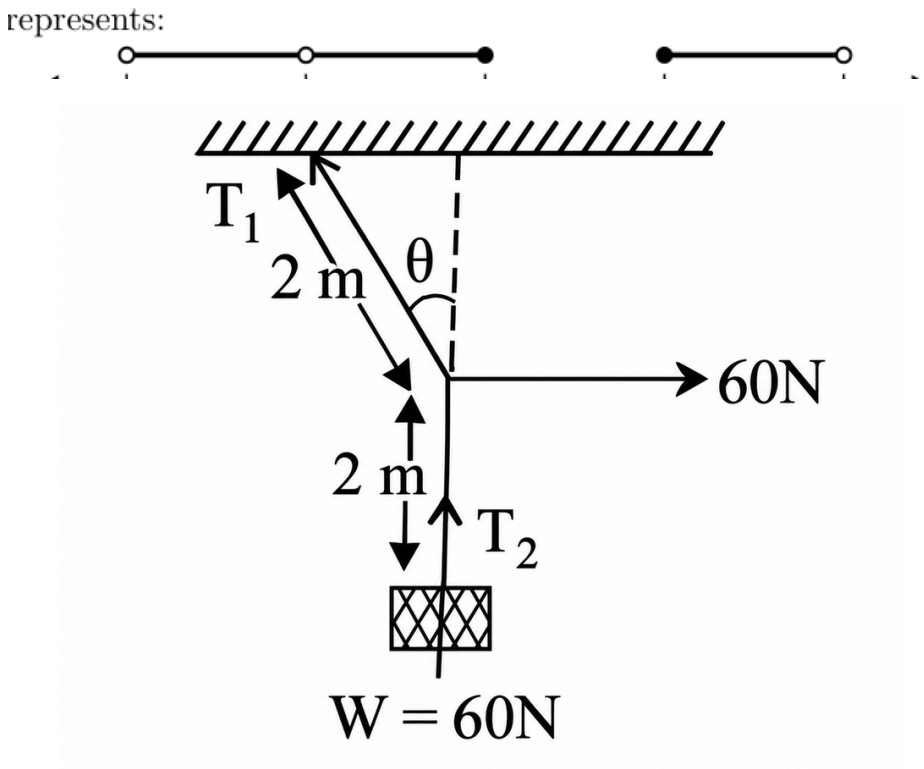

Physics · Q3 · question continued

QUESTION 03 PHYSICS

SKIPPED

Rotational Motion · Moment of inertia · Easy · MCQ · 0 marks · 1m 06s

The moment of inertia of the rigid body shown about the axis is:

OPTIONS

A. The potential difference across the resistor is 6 V.

B. The current through the branch is 2 A.

C. The power dissipated in the circuit is 24 W.

D. A very long alternative answer that must wrap cleanly without clipping the question block or the option column.

STUDENT RESPONSE
Not attempted

CORRECT ANSWER
D

PERFORMANCE INSIGHT
Not attempted — no marks awarded

EXPLANATION

Use the parallel-axis theorem. Complete solution. Apply the governing relation and substitute the values stated in the question.

$$\oint \mathbf{E} \cdot d\mathbf{A} = \frac{q_{enc}}{\varepsilon_0}$$

Physics · Q3 · explanation continued

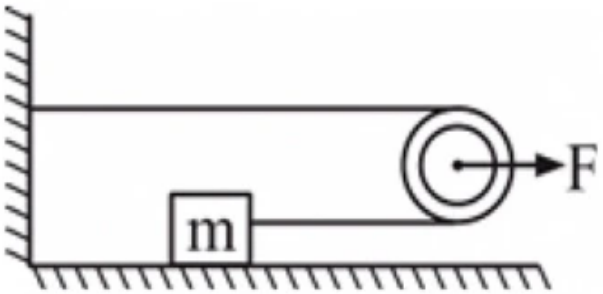

The closed surface encloses the charge distribution shown in the figure, so the normal component of the field is constant across the curved surface and vanishes across the flat ends. Evaluating the flux integral gives the result reported in the key. Check every sign convention, unit and limiting case before selecting the final option.

QUESTION 04 PHYSICS

CORRECT

Modern Physics · Photoelectric effect · Medium · MCQ · 4 marks · 5m 12s

The graph in the figure plots stopping potential against frequency. Identify the correct interpretation.

OPTIONS

A. The potential difference across the resistor is 6 V.

B. The current through the branch is 2 A.

C. The power dissipated in the circuit is 24 W.

D. A very long alternative answer that must wrap cleanly without clipping the question block or the option column.

STUDENT RESPONSE
A

CORRECT ANSWER
A

PERFORMANCE INSIGHT
Answered correctly — 4 marks

EXPLANATION

The slope of the graph is h/e. Complete solution. Apply the governing relation and substitute the values stated in the question.

$$\oint \mathbf{E} \cdot d\mathbf{A} = \frac{q_{enc}}{\varepsilon_0}$$

The closed surface encloses the charge distribution shown in the figure, so the normal component of the field is constant across the curved surface and vanishes across the flat ends. Evaluating the flux integral gives the result reported in the key. Check every sign convention, unit and limiting case before selecting the final option.

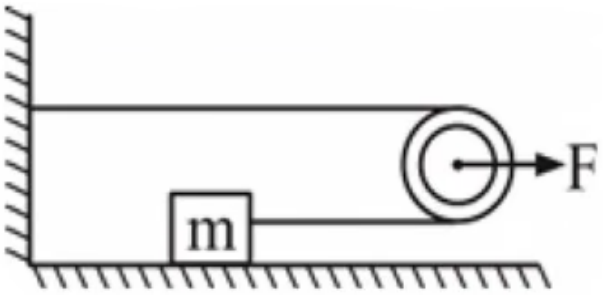

Physics · Q5 · question continued

QUESTION 05 PHYSICS

INCORRECT

Optics · Ray optics · Hard · MCQ · −1 mark · 3m 18s

The ray diagram in the figure shows a lens combination. The final image is:

OPTIONS

A. The potential difference across the resistor is 6 V.

B. The current through the branch is 2 A.

C. The power dissipated in the circuit is 24 W.

D. A very long alternative answer that must wrap cleanly without clipping the question block or the option column.

STUDENT RESPONSE

B

CORRECT ANSWER

C

PERFORMANCE INSIGHT

Answered incorrectly — 1 mark deducted

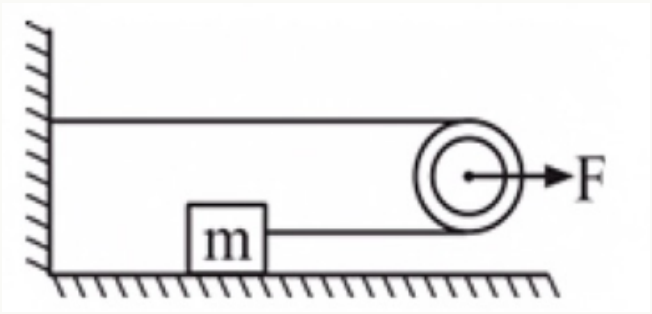

EXPLANATION

Apply the lens formula twice. Complete solution. Apply the governing relation and substitute the values stated in the question.

$$\oint \mathbf{E} \cdot d\mathbf{A} = \frac{q_{enc}}{\varepsilon_0}$$

The closed surface encloses the charge distribution shown in the figure, so the normal component of the field is constant across the curved surface and vanishes across the flat ends. Evaluating the flux integral gives the result reported in the key. Check every sign convention, unit and limiting case before selecting the final option.

Physics · Q5 · explanation continued

QUESTION 06 PHYSICS

CORRECT

Kinematics · Relative motion · Easy · MCQ · 4 marks · 1m 42s

A particle moves with the velocity-time graph shown. The displacement in 4 s is:

represents:

OPTIONS

A. The potential difference across the resistor is 6 V.

B. The current through the branch is 2 A.

C. The power dissipated in the circuit is 24 W.

D. A very long alternative answer that must wrap cleanly without clipping the question block or the option column.

STUDENT RESPONSE
D

CORRECT ANSWER
D

PERFORMANCE INSIGHT
Answered correctly — 4 marks

EXPLANATION

Area under the graph. Complete solution. Apply the governing relation and substitute the values stated in the question.

$$\oint \mathbf{E} \cdot d\mathbf{A} = \frac{q_{enc}}{\varepsilon_0}$$

The closed surface encloses the charge distribution shown in the figure, so the normal component of the field is constant across the curved surface and vanishes across the flat ends. Evaluating the flux integral gives the result reported in the key. Check every sign convention, unit and limiting case before selecting the final option.

QUESTION 07 PHYSICS

INCORRECT

Properties of Matter · Elasticity · Medium · MCQ · −1 mark · 2m 54s

The stress-strain curve for the material is shown. Which region represents elastic behaviour?

OPTIONS

A. The potential difference across the resistor is 6 V.

B. The current through the branch is 2 A.

C. The power dissipated in the circuit is 24 W.

D. A very long alternative answer that must wrap cleanly without clipping the question block or the option column.

STUDENT RESPONSE

A

CORRECT ANSWER

B

PERFORMANCE INSIGHT

Answered incorrectly — 1 mark deducted

EXPLANATION

The elastic region ends at the yield point.

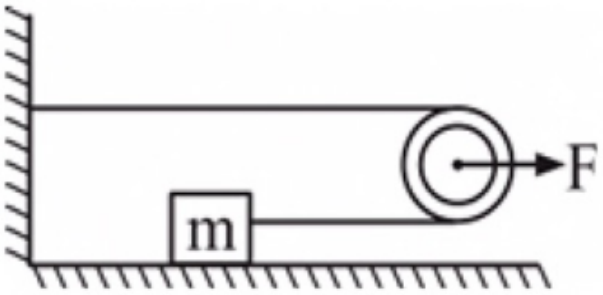

Physics · Q8 · question continued

QUESTION 08 PHYSICS

CORRECT

Thermodynamics · First law · Medium · MCQ · 4 marks · 3m 54s

The indicator diagram in the figure represents a cyclic process. The net work done is:

OPTIONS

A. The potential difference across the resistor is 6 V.

B. The current through the branch is 2 A.

C. The power dissipated in the circuit is 24 W.

D. A very long alternative answer that must wrap cleanly without clipping the question block or the option column.

STUDENT RESPONSE

C

CORRECT ANSWER

C

PERFORMANCE INSIGHT

Answered correctly — 4 marks

EXPLANATION

Net work is the enclosed area. Complete solution. Apply the governing relation and substitute the values stated in the question.

$$\oint \mathbf{E} \cdot d\mathbf{A} = \frac{q_{enc}}{\varepsilon_0}$$

The closed surface encloses the charge distribution shown in the figure, so the normal component of the field is constant across the curved surface and vanishes across the flat ends. Evaluating the flux integral gives the result reported in the key. Check every sign convention, unit and limiting case before selecting the final option.

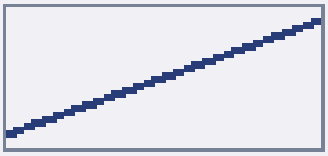

Physics · Q9 · question continued

QUESTION 09 PHYSICS

CORRECT

Waves · Standing waves · Easy · MCQ · 4 marks · 1m 24s

The standing wave pattern shown corresponds to which harmonic?

OPTIONS

A. The potential difference across the resistor is 6 V.

B. The current through the branch is 2 A.

C. The power dissipated in the circuit is 24 W.

D. A very long alternative answer that must wrap cleanly without clipping the question block or the option column.

STUDENT RESPONSE
B

CORRECT ANSWER
B

PERFORMANCE INSIGHT
Answered correctly — 4 marks

EXPLANATION

Count the nodes and antinodes.

02 Chemistry

4 questions

QUESTION 10 · CHEMISTRY

Chemical Bonding · Molecular geometry · Medium · MCQ · −1 mark · 3m 36s

The molecular structure shown belongs to which geometry?

OPTIONS

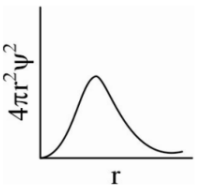

The answer choices are figures and follow the question figure.

Student response: A

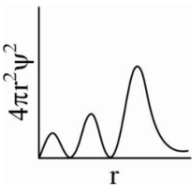

Correct answer: D

Answered incorrectly — 1 mark deducted

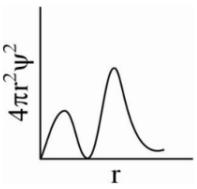

(a) (A)

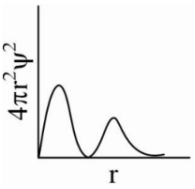

(b) (B)

(c) (C)

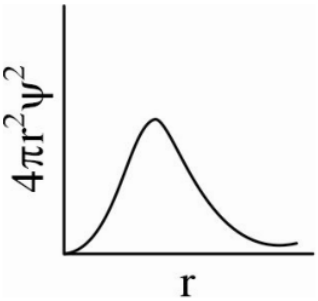

(d) (D)

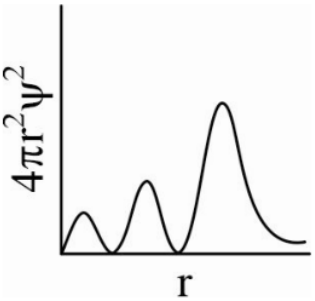

Chemistry · Q10 · options continued

OPTIONS

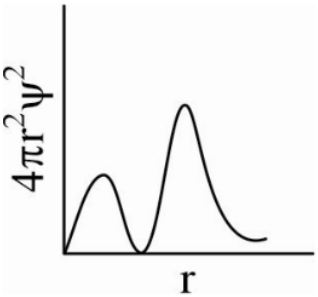

A.

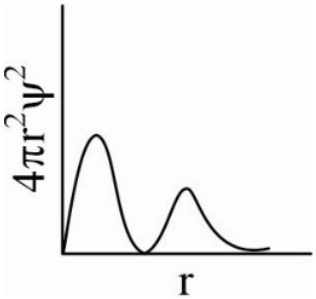

B.

C.

D.

EXPLANATION

Count the electron domains around the central atom. Complete solution. Apply the governing relation and substitute the values stated in the question.

$$\oint \mathbf{E} \cdot d\mathbf{A} = \frac{q_{enc}}{\varepsilon_0}$$

The closed surface encloses the charge distribution shown in the figure, so the normal component of the field is constant across the curved surface and vanishes across the flat ends. Evaluating the flux integral gives the result reported in the key. Check every sign convention, unit and limiting case before selecting the final option.

Chemistry · Q11 · question continued

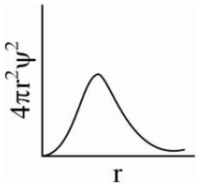

QUESTION 11 CHEMISTRY

INCORRECT

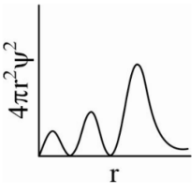

Organic Chemistry · Reaction mechanism · Hard · MCQ · −1 mark · 6m 06s

The reaction scheme shown proceeds through which intermediate?

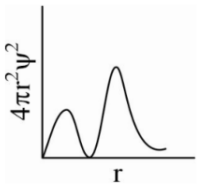

(a) (A)

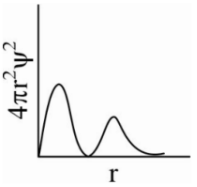

(b) (B)

(c) (C)

(d) (D)

OPTIONS

A. The potential difference across the resistor is 6 V.

B. The current through the branch is 2 A.

C. The power dissipated in the circuit is 24 W.

D. A very long alternative answer that must wrap cleanly without clipping the question block or the option column.

STUDENT RESPONSE

D

CORRECT ANSWER

B

PERFORMANCE INSIGHT

Answered incorrectly — 1 mark deducted · Formula Error

EXPLANATION

The leaving group departs first, giving a planar carbocation. Complete solution. Apply the governing relation and substitute the values stated in the question.

$$\oint \mathbf{E} \cdot d\mathbf{A} = \frac{q_{enc}}{\varepsilon_0}$$

The closed surface encloses the charge distribution shown in the figure, so the normal component of the field is constant across the curved surface and vanishes across the flat ends. Evaluating the flux integral gives the result reported in the key. Check every sign convention, unit and limiting case before selecting the final option.

Chemistry · Q12 · question continued

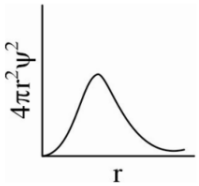

QUESTION 12 CHEMISTRY

CORRECT

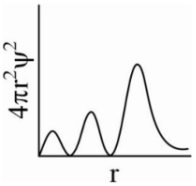

Electrochemistry · Cell potential · Medium · Numerical · 4 marks · 2m 12s

Using the standard potentials in the table shown, the cell potential is:

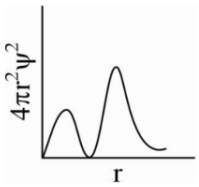

(a) (A)

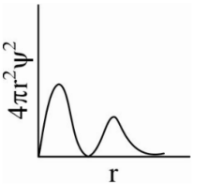

(b) (B)

(c) (C)

(d) (D)

OPTIONS

A. The potential difference across the resistor is 6 V.

B. The current through the branch is 2 A.

C. The power dissipated in the circuit is 24 W.

D. A very long alternative answer that must wrap cleanly without clipping the question block or the option column.

STUDENT RESPONSE

C

CORRECT ANSWER

C

PERFORMANCE INSIGHT

Answered correctly — 4 marks

EXPLANATION

E_cell = E_cathode - E_anode.

QUESTION 13 CHEMISTRY

CORRECT

Thermodynamics · Enthalpy · Easy · MCQ · 4 marks · 1m 54s

No figure is attached to this question; it tests the calculation described above.

OPTIONS

A. The potential difference across the resistor is 6 V.

B. The current through the branch is 2 A.

C. The power dissipated in the circuit is 24 W.

D. A very long alternative answer that must wrap cleanly without clipping the question block or the option column.

STUDENT RESPONSE

B

CORRECT ANSWER

B

PERFORMANCE INSIGHT

Answered correctly — 4 marks

EXPLANATION

Use Hess law.

03 Mathematics

5 questions

QUESTION 14 MATHEMATICS

SKIPPED

Calculus · Definite integration · Hard · MCQ · 0 marks

Evaluate the definite integral whose region is shaded in the graph.

OPTIONS

A. The potential difference across the resistor is 6 V.

B. The current through the branch is 2 A.

C. The power dissipated in the circuit is 24 W.

D. A very long alternative answer that must wrap cleanly without clipping the question block or the option column.

STUDENT RESPONSE

Not attempted

CORRECT ANSWER

A

PERFORMANCE INSIGHT

Not attempted — no marks awarded

EXPLANATION

The region is symmetric about the y-axis. Complete solution. Apply the governing relation and substitute the values stated in the question.

$$\oint \mathbf{E} \cdot d\mathbf{A} = \frac{q_{enc}}{\varepsilon_0}$$

The closed surface encloses the charge distribution shown in the figure, so the normal component of the field is constant across the curved surface and vanishes across the flat ends. Evaluating the flux integral gives the result reported in the key. Check every sign convention, unit and limiting case before selecting the final option.

Mathematics · Q15 · question continued

QUESTION 15 MATHEMATICS

CORRECT

Coordinate Geometry · Conic sections · Medium · MCQ · 4 marks · 4m 24s

The curve in the figure has eccentricity:

represents:

OPTIONS

A. The potential difference across the resistor is 6 V.

B. The current through the branch is 2 A.

C. The power dissipated in the circuit is 24 W.

D. A very long alternative answer that must wrap cleanly without clipping the question block or the option column.

STUDENT RESPONSE

A

CORRECT ANSWER

A

PERFORMANCE INSIGHT

Answered correctly — 4 marks

EXPLANATION

Compare with the standard form and identify a and b. Complete solution. Apply the governing relation and substitute the values stated in the question.

$$\oint \mathbf{E} \cdot d\mathbf{A} = \frac{q_{enc}}{\varepsilon_0}$$

The closed surface encloses the charge distribution shown in the figure, so the normal component of the field is constant across the curved surface and vanishes across the flat ends. Evaluating the flux integral gives the result reported in the key. Check every sign convention, unit and limiting case before selecting the final option.

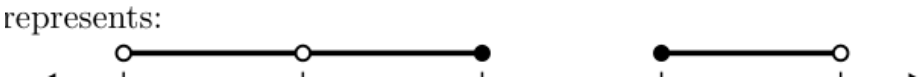

Mathematics · Q16 · question continued

QUESTION 16 MATHEMATICS

INCORRECT

Algebra · Matrices · Medium · MCQ · −1 mark · 3m 06s

The transformation shown in the figure maps the unit square to:

OPTIONS

A. The potential difference across the resistor is 6 V.

B. The current through the branch is 2 A.

C. The power dissipated in the circuit is 24 W.

D. A very long alternative answer that must wrap cleanly without clipping the question block or the option column.

STUDENT RESPONSE
C

CORRECT ANSWER
B

PERFORMANCE INSIGHT
Answered incorrectly — 1 mark deducted

EXPLANATION

Apply the matrix to the basis vectors.

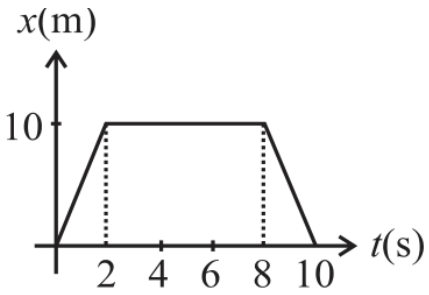

Mathematics · Q17 · question continued

QUESTION 17 MATHEMATICS

CORRECT

Vectors · Dot product · Easy · MCQ · 4 marks · 2m

The angle between the vectors represented in the figure is:

OPTIONS

A. The potential difference across the resistor is 6 V.

B. The current through the branch is 2 A.

C. The power dissipated in the circuit is 24 W.

D. A very long alternative answer that must wrap cleanly without clipping the question block or the option column.

STUDENT RESPONSE
D

CORRECT ANSWER
D

PERFORMANCE INSIGHT
Answered correctly — 4 marks

EXPLANATION

Use the dot-product definition.

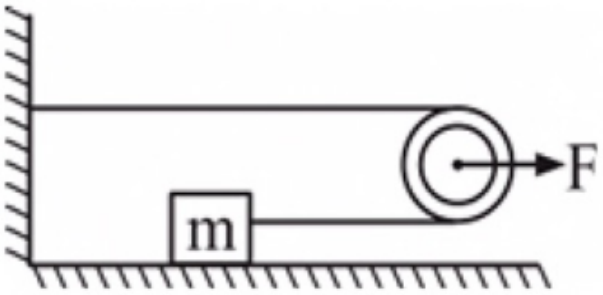

Mathematics · Q18 · question continued

QUESTION 18 MATHEMATICS

INCORRECT

Probability · Bayes theorem · Hard · MCQ · −1 mark · 5m 48s

The tree diagram in the figure summarises the experiment. The required probability is:

OPTIONS

A. The potential difference across the resistor is 6 V.

B. The current through the branch is 2 A.

C. The power dissipated in the circuit is 24 W.

D. A very long alternative answer that must wrap cleanly without clipping the question block or the option column.

STUDENT RESPONSE

A

CORRECT ANSWER

C

PERFORMANCE INSIGHT

Answered incorrectly — 1 mark deducted

EXPLANATION

Apply Bayes theorem with the prior probabilities from the tree.
